PROGRAMME:

Programme will include lectures covering theoretical principles of ecosystem restoration and specialized lectures focusing on planning, realization evaluation and monitoring of restoration work including restoration forest, agriculture land, close to natural areas, including use of succession and formation of post mining lakes.

Presented principles will be demonstrated during field trip excursion

ABOUT Summer school:

Summer school is intended for PhD students and young professionals in areas related to ecology, nature protection, landscape planning and other field-related to post mining landscape restoration.

Summer school is supported by TRACER project, school will be free but participants will be responsible for their travel and accommodation costs; we will also cover a small fee to support meals during excursion.
